

# Frontend Development with React.js

## Project Documentation

### 1. Introduction

- o Project Title : Rhythmic Tunes: your melodic companion
- o TEAM LEADER: : VIDHYA D
- o ROLE : CODING AND DEVELOPMENT
- o TEAM MEMBER : VIKASHINI D
- o ROLE : CODING AND DEVELOPMENT
- o TEAM MEMBER : YUVAMALA M
- o ROLE : DEMO VIDEO
- o TEAM MEMBER : SUMITHRA M
- o ROLE : DOCUMENT CREATER

## 2. Project Overview

- **Purpose:** The purpose of the Rhythmic Tunes Music Player is to provide a user-friendly application for playing music..
- **Features:** Key features include: music playback, playlist creation, and search functionality.

## 3. Architecture

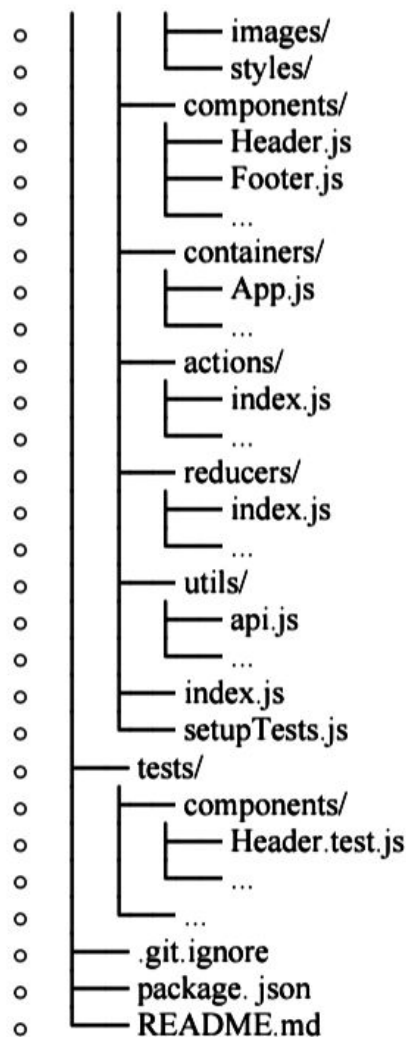

- **Component Structure:** Key features include: music playback, playlist creation, and search functionality.
- **State Management:** The application uses the Context API for global state management to handle the current song, playback status, and user-created playlists.
- **Routing:** React Router is used to manage navigation between different views, such as the home page and the playlist page

## 4. Setup Instructions

- **Prerequisites:** The required software dependencies are Node.js and npm ,React.js.
- **Installation:** Provide a step-by-step guide to Clone the repository from GitHub. Navigate to the client directory.
- \* Run npm install to install dependencies.
- \* Configure environment variables for any API keys

## 5. Folder Structure

- **Client:** The main React application is organized into folders such as components, pages, and assets for images and audio files.
- **Utilities:** Helper functions for music playback and custom hooks for managing audio state are located in the utils folder
- **Code:**
- project-name/
  - |— public/
    - |— index.html
    - |— favicon.ico
  - |— src/
    - |— assets/

## 6. Running the Application

- Provide commands to start the frontend server locally.
  - **Frontend:** npm start in the client directory.

## 7. Component Documentation

- **Key Components:** Manages music playback controls. It receives a song prop.
- \* Playlist Component: Displays the list of songs and manages playlist creation.
- \* Search Component: Handles searching for songs
- **Reusable Components:** Button Component: A configurable button component used throughout the application.
- \* Song Card Component: A component for displaying individual songs in lists.

## 8. State Management

- **Global State:** The Context API is used to manage the global state, ensuring that the current song and playback status are accessible to all components..
- **Local State:** se use State hooks to manage their own local state, such as form inputs or UI toggles

## 9. User Interface

- Provide screenshots or GIFs showcasing different UI features, such as pages, forms, or interactions.

- 

## 10. Styling

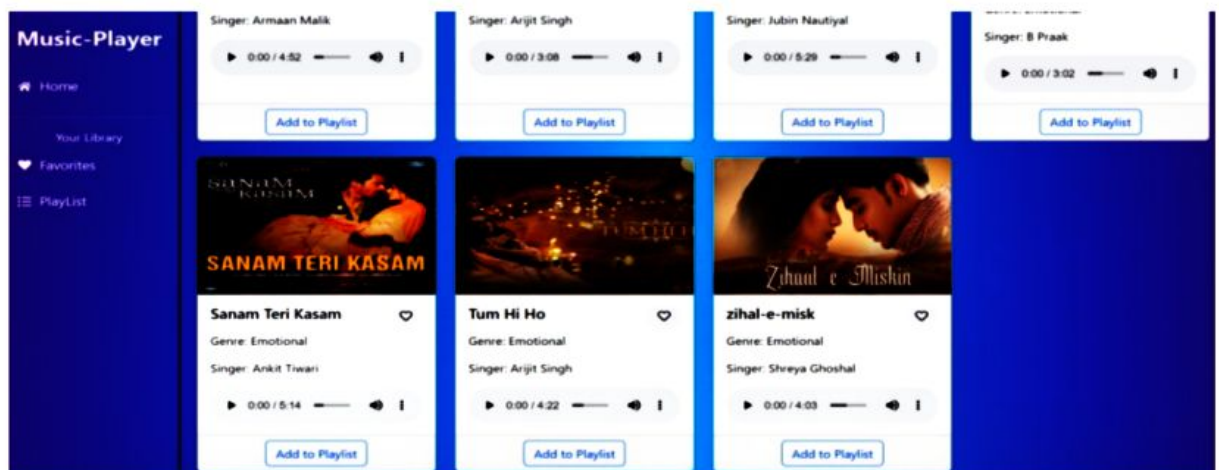

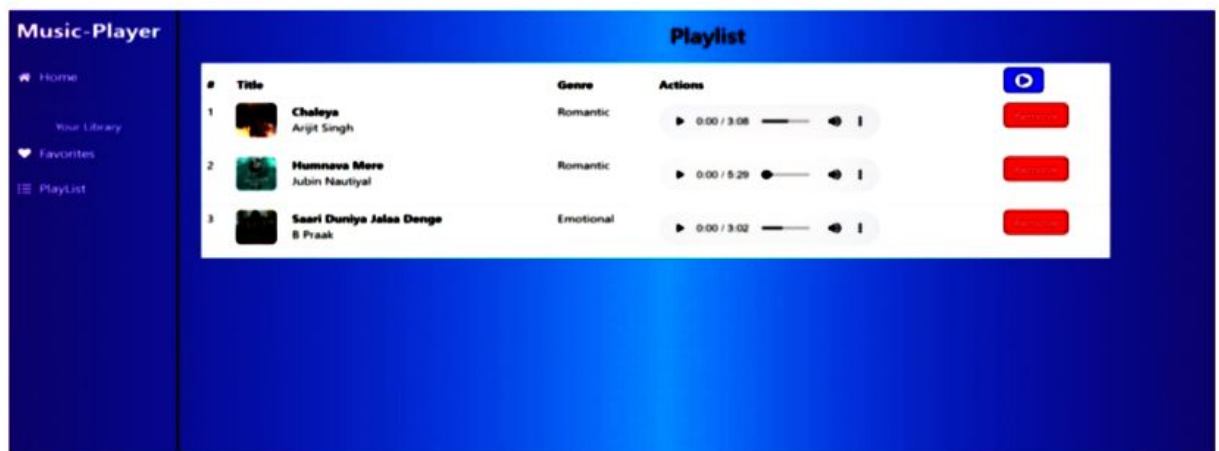

- **CSS Frameworks/Libraries:** Describe any CSS frameworks, libraries, or pre-processors (e.g., Sass, Styled-Components) used.
- **Theming:** A custom design system with light and dark themes is implemented

## 11. Testing

- **Testing Strategy:** The application uses Jest and React Testing Library for unit and integration testing of components.

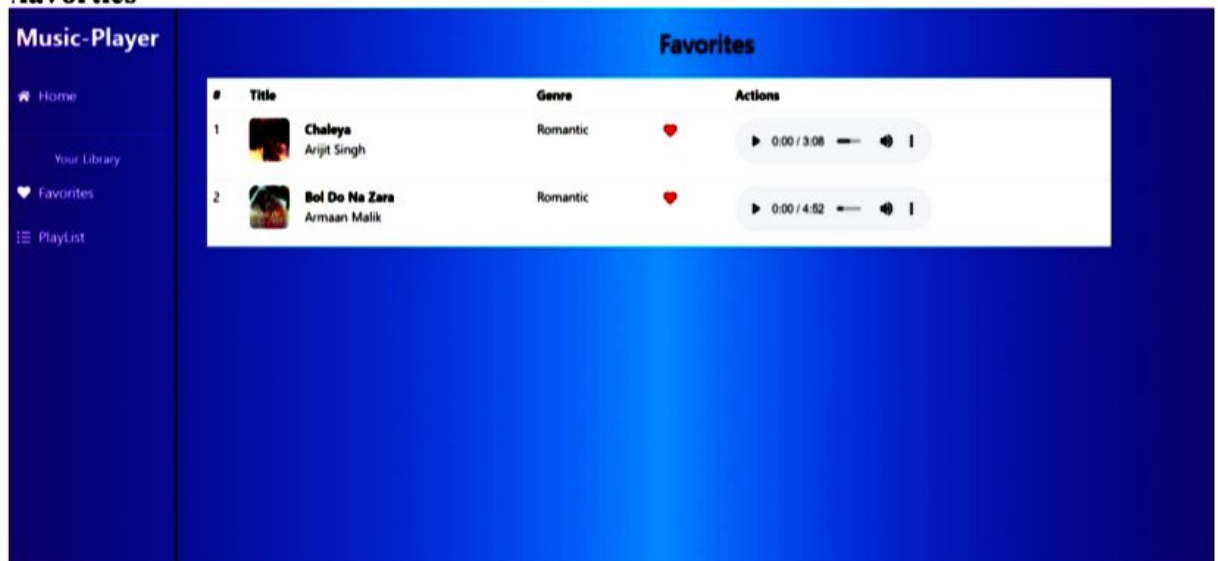

12. **Code Coverage:** Code coverage is tracked using a tool to ensure all key components are adequately tested.

## 13. Screenshots or Demo:

- 

## favorties

### 13. Known Issues

- Any known bugs or issues, such as occasional playback glitches on certain browsers, should be documented here

### 14. Future Enhancements

- Potential future features could include a user authentication system, enhanced search functionality, and adding more animations to the user interface.
